MYKRIS NEWSLETTER VOL 2.0

I-MAN SOLUTION (CASE STUDY)

Company Introduction

An air-conditioning manufacturer in Malaysia producing a wide range of Heating, Ventilation, Air-Conditioning equipment for the Malaysian and global export markets from basic residential air-conditioners to high technology light commercial and commercial heat pump, air-cooled and water-cooled chillers.

Challenges

- i) Fully dependent on one Internet Service Provider
- ii) Stable bandwidth for business critical application
- iii) Performances issue due to limited bandwidth
- iv) Slow response time and support
- v) Costly Upgrade Exercise & Investment

0% CAPEX

Solution

Based on the company's business critical operation requirement, a stable leased line is vital for its business operation. MyKris's IPVPN solution successfully provided a significant improvement for the company's inter branch connectivity by increasing higher bandwidth for each branch from 128kb to 1mbps and MyKris also has invested network equipment with zero front investment from customer which has created higher value and benefits. As a result, it reduced user complaints and provided better data communication transfer at a cost effective manner. Now the company is enjoying better support and faster turn around time from MyKris's 24 hours call centre and network operating centre.
